LUE – COUNTERSTAY SYSTEM WITH NEEDLE AND CYLINDRICAL ROLLER FLAT CAGE ASSEMBLIES

The LUE counterstay system is particularly suited to high-precision applications. This system provides the highest level of accuracy of all linear guidance systems with rolling elements. It is the perfect solution when a high degree of accuracy and rigidity are required, particularly when the main load operates in a vertical or lateral direction. The separation between locating and non-locating bearings prevents the system from becoming distorted by thermal expansion.

The LUE counterstay system does not require any adjustment after assembly.

The system is preloaded by components which have been adjusted against one another in terms of dimensions. Preloading is established by observing the prescribed tightening torques during assembly without any adjustments being required.

A MATERIAL

M and V and S and J guideways: Hardened tool steel 1.2842 HRc 58 – 62

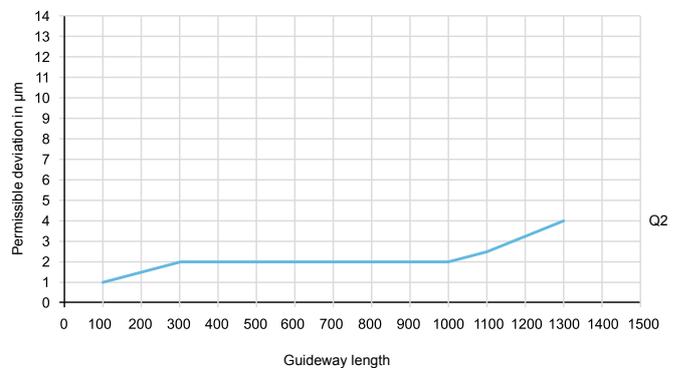

LU counterstays: counterstay bar (LUT) made from hardened tool steel 1.2842 HRc 58 – 62 and a distance bar (LUD) made from soft construction steel.

B QUALITY

The raceways and locating faces are precision ground.

Q2: particularly precise quality for exceptionally demanding structures

The LUE counterstay system is only supplied in Q2 quality, which is the highest quality for standard guideways (parallelism tolerance of the raceways to the reference sides of the guideways in relation to a defined length).

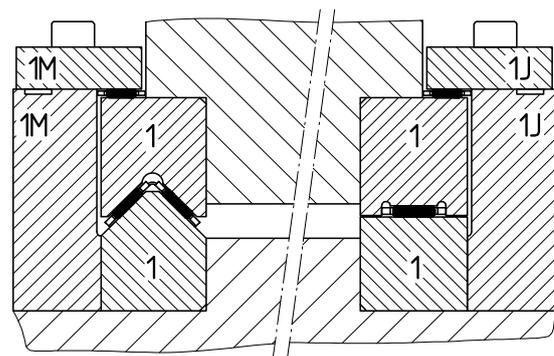

SPECIAL EXECUTIONS
SEE CHAPTER 10 ALTERNATIVE VERSIONS

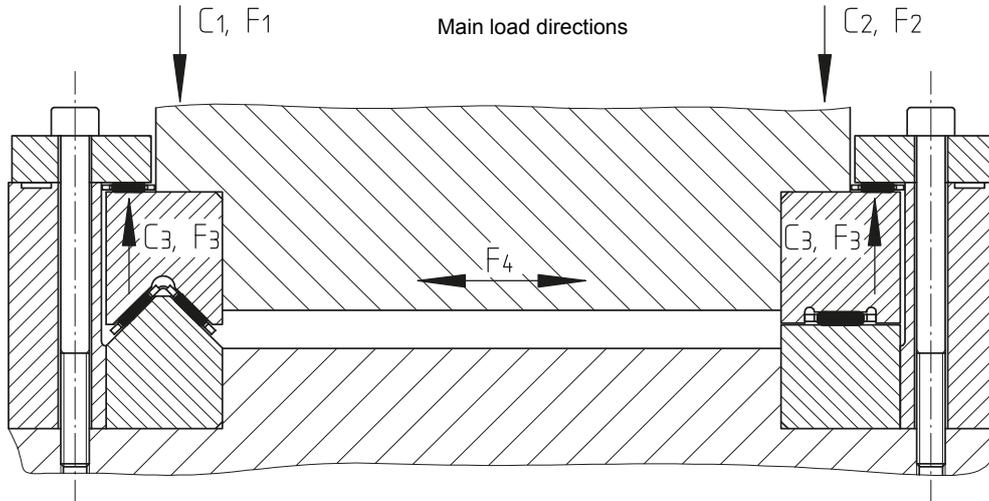

C MATCHING IN SETS

The guideways are manufactured, labelled and packaged by sets.

NB

Under no circumstances must the counterstay components be mixed up as matching and preloading could no longer be guaranteed in that case.

DIMENSIONS IN MM

Type	Load carrying capacity						
	Basic dynamic load ratings			Limiting loads*			
	C ₁ (N)	C ₂ (N)	C ₃ (N)	F ₁ (N)**	F ₂ (N)**	F ₃ (N)***	F ₄ (N)***
LUE 5025	25'960	35'620	21'410	13'840	15'630	1'200	7'500
LUE 6035	40'200	36'710	70'410	38'690	58'620	1'500	10'000
LUE 7040	62'840	56'850	70'410	42'500	61'720	2'500	16'000
LUE 8050	82'980	88'860	70'410	43'150	69'540	4'000	23'000

* For a theoretical cage length of 100 mm in load direction according to table (see above)
 Calculation of limiting loads for effective cage lengths:

$$F_{w1,2,3} = F_{1,2,3} \cdot \frac{L_k - 2e + t}{100} \text{ where } Z = \frac{L_k - 2e + 1}{100} = \text{whole number}$$

** limited by system preload

*** limited by load carrying capacity / friction locking effect of fixing screws

TIGHTENING TORQUE FOR FIXING SCREWS:

For V1 and V2 screws	Tightening torque
Strength category 10.9	Nm
M6	12
M8	29
M10	58
M12	101
